Education

AmirKabir University of Technology, BS in Computer Engineering

Sept 2020 – Oct 2025

Experience

Software Engineer, Hooshmand Sazan Bita – Karaj, Iran

July 2022 – May 2024

- Architected and developed a scalable Access Control system using Java Spring Boot and React, leveraging a microservices approach to support application growth.
- Implemented a fine-grained Role-Based Access Control (RBAC) system to securely manage user permissions and application privileges.
- Engineered a custom embedded device with an STM32 microcontroller, integrating Weigand, RS485, and LCD interfaces while enabling communication via HTTP/Sockets.
- Developed an Analytics Service from the ground up to generate automated reports and data charts, delivering critical business intelligence.
- Established full-stack infrastructure: deployed services on HPE ProLiant servers (Windows/Linux) and configured secure networking with MikroTik & Cisco equipment.
- Integrated diverse biometric and card readers into the software platform, expanding system functionality and compatibility.

Software Engineer, Meshkot – Tehran, Iran

July 2024 – Present

- Architected and secured the corporate network and server infrastructure (HPE ProLiant, Cisco, MikroTik), virtualized with Proxmox, and enforced ISO 27001 security standards.
- Implemented and managed core DevOps tools including pfSense, Zabbix, and Proxmox Backup Server for security, monitoring, and backup.
- Established a self-hosted development toolchain (GitLab, Jira, Confluence) to enhance team collaboration and productivity.
- Engineered a full Identity and Access Management (IAM) service in Golang, implementing custom RBAC, ABAC, and a Policy Engine for granular security.
- Developed a secure Key Management Service (KMS) to serve as a centralized vault for all user and device credentials.
- Built an IoT device management platform utilizing the LwM2M protocol for efficient device communication and control.
- Architected and developed Java Card applets for telecom-grade SIM cards, ensuring strict compliance with ETSI and 3GPP standards to enable secure mobile telecommunications.

Projects

Windows Manager Configuration & Customization

github.com/ib699/dotfiles

- Configuration and Customization of Tiling Window Managers (Qtile, DWM, Hyprland, i3) for my daily Linux environment.
- Tools Used: Shell, Python, C

Technical Skills

Languages: Shell, C, Embedded-C, Golang, Java, Rust, Git, SQL, NoSQL

Linux Systems: Arch, Debian, Nix, Rocky, Fedora, Ubuntu, Kali, Blackarch, Parrot

Network Management: Mikrotik, Cisco, FiberHome S4800 Switch

Server Management: HPE ProLiant Gen10, Gen9, Gen8, Gen7

Virtualization: Proxmox, Qemu/KVM, Docker, VMWARE ESX1

DevOps: Kubernetes, OpenStack, Hadoop, Spark

Technologies: Bash, Zsh, Spring Boot, Openmp, Cuda, Stm32, Flask, Django, FastApi, REST, Java Card API, ETSI & 3GPP Standards
